Whole Rock Summary	A olivine-basalt with olivine completely recrystallized to iddingsite. The sample has a fine grained altered rim that grades into a coarser core. The sample is highly vesicular with most vesicles infilled with either calcite or phosphorite. Sample contains a Mn-crust.		
Thin Section Summary	A completely recrystallized olivine-basalt. All the olivine grains are recrystallized to iddingsite. A few skeletal plagioclase and clinopyroxene grains remain in the sample and may constitute phenocrysts. The groundmass consists of mixed skeletal plagioclase and serpentine with some unidentifiable mesostasis. Vesicles range from complete calcite filling to calcite or palagonite rims.
