Whole Rock Summary	A coarse grained, poorly sorted fossiliferous limestone. Contains a variety of calcic tests ranging up to ~1cm in diameter. Contains a thin FeMn coating.		
Thin Section Summary	A fossiliferous limestone with a variety of shells, tests and carbonate fragments. The matrix consists of a fine carbonate material. The carbonate matrix ranges in color, density and structure with some layers displaying distinct patterns. The darker color layers are composed of fine (10-50um) euhedral calcite crystals with slight gaps between them.
